

## Types of Shot

What variations of shot do we now see, in contrast to the early film example?

- Film-makers use a variety of shots, including:
- close-ups;
- long shots (from a distance);
- mid-shots;
- low-angle shots;
- wide shots.

Rather than being in a static, fixed position, a camera may pan and zoom to change the frame of the shot.

## Filming and Editing

The next part of the production process is editing your separate film segments into a complete movie using the computer.

Before this stage, everyone should have completed all required filming.

However, there may be some occasions when you realise that an extra segment needs to be captured.

You should believe that all your filming is complete before you begin the editing process and your files are ready to be imported into video editing software.

I can use appropriate software and other tools effectively to write a film script.

I can locate and check appropriate digital content, and provide accurate crediting of sources.

I can use digital recording devices to film and import into video editing software.

I can plan, conduct and import video interviews as part of a short film.

I can use video editing software to create a short film.

I can use video editing software to turn a film project into a finished movie and present it.
